

# Proofpoint Enterprise Bundles

Legend	
I	Included
O	Optional

Product	Description	Core	Core Plus	Advanced	Complete
Email Protection	Proofpoint Email Protection helps secure and control your inbound & outbound email. Gain granular control over email security controls such as imposter email, phishing, malware, spam, bulk mail and more.	I	I	I	I
Threat Response Auto Pull (TRAP)	TRAP empowers security teams with the tools to analyse emails and move malicious or unwanted emails to quarantine after delivery. With TRAP, you get a powerful solution that exponentially reduces the time needed for your security and messaging teams to clean up email	I	I	I	I
CLEAR (Closed-Loop Email Analysis and Response), Mailbox Abuse	CLEAR empowers users to play an active role in security by providing users with the email reporting button. Reported emails are automatically analysed and enriched by Proofpoint. Security defenders can then use TRAP to remediate at scale based on reported mail.	I	I	I	I
Targeted Attack Protection (TAP)	TAP URL Defense provides unique predictive analysis that identifies and sandboxes suspicious URLs based on email traffic patterns. All URLs that reach inboxes are transparently rewritten.	I	I	I	I
People Risk Explorer	Gives security executives visibility into the risk people pose to the rest of the organisation using telemetry from Proofpoint and third-party products.	I	I	I	I
Security Awareness Training	Tailored cybersecurity education online that's targeted to the vulnerabilities, roles and competencies of your users providing education in bite-sized chunks resulting in sustainable habits.	O	I	I	I

Product	Description	Core	Core Plus	Advanced	Complete
Email Fraud Defence	Streamline DMARC implementation and get visibility into supplier fraud. Protect your brand from email fraud attacks and mitigate the risk of inbound impostor threats. Proofpoint authenticates all emails delivered to and sent from your organisation.				
Supplier Threat Protection	Defend your supply chain against phishing, malware and business email compromise (BEC). Supplier Threat Protection detects email patterns from known senders to your organisation and other Proofpoint customers that suggest an account may have been compromised.				
Secure Email Relay	Proofpoint Secure Email Relay (SER) is a hosted, multi-tenant solution. It puts you in control of applications, devices and email providers that are sending email using your organisation's domains				
Email Data Loss Prevention (DLP) and Encryption	Proofpoint Email DLP and Proofpoint Email Encryption give you increased control over your sensitive data, letting you better meet compliance requirements.				
Email Exfiltration Protection	Proofpoint's Insider Threat Management (ITM) protects against data loss and brand damage involving insiders acting maliciously, negligently, or unknowingly.				
Email Mis-delivery Protection	Proofpoint AI uses relationship graphs, deep content inspection and behavioral analysis to understand typical employee behavior. That means your organization's sensitive data is protected when the wrong recipient is auto-filled, or employees share the wrong attachment.				
TAP Account Takeover	TAP remediates malicious mailbox rule changes, abused third party apps and data exfiltration across email and cloud environments. Its graphical attack sequence timeline helps speed up investigations of compromised accounts and suspicious activities.				
Identity Threat Defence	Proofpoint Identity Threat Defence provides discovery and remediation of identity vulnerabilities as well as agentless deception-based detections and forensics.
